

SQL Server function to read SQL Profiler trace files (fn_trace_gettable)

Posted On Aug 07, Posted by [SSTS](#) Category [Blog](#)

SQL Server Profiler creates files on the OS that can later be read in for analysis. The following parses a trace file and inserts the data into a table.

```
SELECT
*
INTO
trace_folder
FROM
::
fn_trace_gettable
(
'C:mytrace.trc'
,
4
)
```
